

# PLANT FIBRE LID USER GUIDE

ABAP 20175

TA8022206762

## Better For the Environment

Plant fibre lids are better for the environment because they are made from rapidly-renewable sugarcane pulp and certified home compostable to Australian (AS5810) and European (NF T51-800) standards.

## Better Stacking

These lids offer the added benefit of easy stackability, allowing for effortless separation when needed.

## Feel & Taste

Similar to paper straws, these lids have a distinct mouthfeel and they might vary slightly, but they still perfectly serve their intended purpose.
